

## **Microbial Inoculants**

Although not specifically nutrients, microbial inoculants such as mycorrhizae and beneficial bacteria, which will aid in the development of the overall root system. This allows for more root surface area for nutrients to be absorbed at a higher rate. This contributes to overall crop development and production. As the saying goes, “The bigger the roots, the bigger the Fruits.

There are many brands and varieties available in today’s market. Deciding what goals are necessary within your own personal grow or operation will determine which type of nutrients you will be using. Getting with a Grow Generation Grow Pro to determine which works best for you is always a great choice.
